

SYSPRO e.net solutions™

Objective

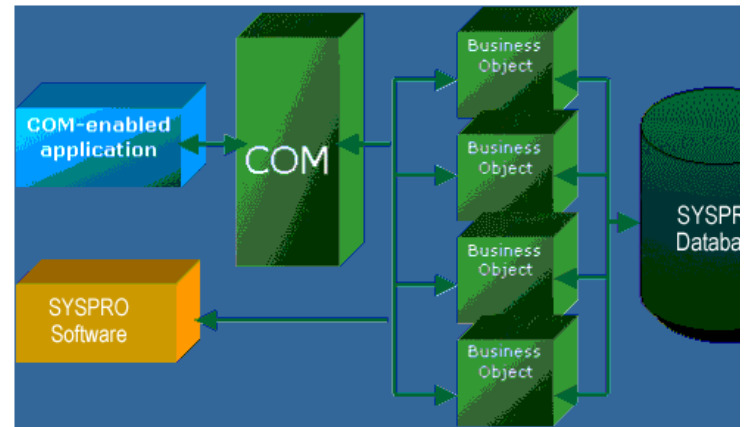

To facilitate integration development and mobile access to SYSPRO and provide the framework for web-based applications.

The value of SYSPRO e.net solutions

- Automate the processing of incoming orders without duplicating data entry
- Let your customers place their own orders on the internet
- Improve inventory accuracy by using handheld devices
- Query critical balances remotely using your mobile phone
- Provide real-time balances and order entry capability to traveling salespeople
- Integrate easily with other specialized products
- Customize your solution without jeopardizing the business logic
- XML architecture means that developments are unaffected database changes as a result of continued enhancements
- Supports localized user interfaces i.e. multi-lingual capabilities

Matching SYSPRO e.net solutions to your business

- Use the Software Developer Library to develop totally customer focused applications
- Use the Document Flow Manager to process documents regardless of their format eliminating duplication and errors
- Use the Web Applications to provide secured access to anyone with Internet Explorer and the appropriate login permissions
- Improve partner relationships with faster, more efficient response times

Benefits

- Simplified development environment
- Reduced development maintenance costs (custom development does not have to be rewritten/compiled)
- Secured interface to SYSPRO database
- Version independence between SYSPRO and the calling application
- Customized solutions
- Reduced network traffic
- Lowered total cost of ownership

Prerequisites

- Any version of Windows 2000, Windows XP Professional or Windows .NET
- Microsoft XML 3.0 or above
