

Web-based Applications

Objective

To provide a new generation of out-the-box applications that can be run on the internet and that can be easily customized to suit end-user requirements

The value of the SYSPRO Web-based Applications

- Built using ASP.Net
- Fully utilizes the Software Developer Library to access SYSPRO data
- Client only requires Explorer 6.0 or higher – no additional client overhead
- Efficient access via the internet
- Component framework reduces network traffic
- Uses same Business Objects as SYSPRO ERP

Matching SYSPRO Web-based Applications to your business

- Out-of-the-box solution that runs on the web
- Multi-lingual capabilities
- Access and setup controlled via the Business Objects
- Display fields easily added or removed from view
- Cascading Style Sheets (CSS) allow appearance customization

Current Web-based Applications

- Applications include, Inventory Query, Order Entry, Customer Order Query, Customer Statements, Customer Information Change and Supplier Information Change
- Please contact your regional SYSPRO office for a full listing of currently available applications

Prerequisites

- A working copy of the Software Developer Library (SDL)
- The Microsoft Common Language Runtime (CLR)
- Microsoft Internet Information Server (IIS)
- A configured copy of the SYSPRO Web-based Applications
- Internet Explorer 6.0 or higher
